

# OSCAR 15 – Features and Improvements

# Appointment window

- Improvements to schedule navigation
- Improved Caseload management interface
- “DS” button to quickly print a daysheet of today’s visits
- Better patient **Search** tool, with Demographic number search, and search ‘history’
  - A *Blank* (don’t type any text) Demographic Search now lists the last 5 demographics accessed by you

# Appointment window, continued

- Printing Appointment Cards with date and time of appointment
- Appointment Reason Type Drop Down List (Contraception/RX/etc) allows for quick-pick appointment Reasons
- Previous Appointment List now filters on Doctor/Deleted Appts

# Master File/Demographic record

- Additional choices for First Nations status, and improved gender selection
- Ability to add section for email and privacy Consent
- Health Care team - can add more than just the one MRP practitioner to a patient's record

# Inbox

- Improved display of results - scanned Docs now show Obs. date *and* upload date
- Advanced Inbox uploading options - more folders and ways to split uploads up for teams
- Improvements to Document viewing – interface buttons now located across top of screen for easier access on smaller monitors

# Administration

- Improved Administration Interface: the layout of the Administration page has changed, but you'll still find all the same features, and a few improvements:
  - Redesigned 'Invoice' lists and accounting reports
  - Improved eForm interface, better management of eForm 'groups'
  - New Prevention List Manager Interface

# Billing

- Overhaul of many of the billing interfaces for easier viewing
- BC MSP “Quick billing” to streamline simple repetitive billings
- Repairs to the Referral physicians listing (we can add them with 5-digit MSP numbers again!)
- OSCAR ‘remembers’ referral doctor history on the billing interface.

# Dashboard

- A new interface to help identify patients based on various reporting criteria, and create actionable items for things like:
  - Identify CDM patients through various measurement or billing history data
  - Placing a diagnosis into charts based on billing history and other criteria
  - Create incentive billing reminders for annual items like CDM

# Consultations

- Customizable appointment instructions
- Improved 'letterhead' interface with more choices.
- Ability to turn off the "Dr." on outgoing consults (great for non-physician use.)
- Link back to the patient Master file to add/update patient information.

# eChart

- Improved, a minor graphical overhaul to clean up the interface
- Demographic Photo in E-Chart allows you to upload a photo of the patient (with a privacy screen - scroll over with mouse to display the picture)
- A Timer for tracking visit duration, and clicking on it will paste duration into current chart note

# eChart, continued

- Allergies: improved interface, with quick-pick buttons for *Penicillin, Sulfa, NKDA*
- Health Care Team – add responsible team members to the chart (populates the same interface in the Master File and vice-versa)

# Other - misc items/improvements

- SRFax integration - incoming faxes direct to the Inbox!
- Newer Firefox ESR - faster and more compatible with newer computers and services
- Improved API - better integrations
- Better connections coming, for CDA/CDX, Excelleris PDFs and API.
