

Practice Support Program

OSCAR: DISEASE REGISTRY

Creating a Custom List
Adding Conditions

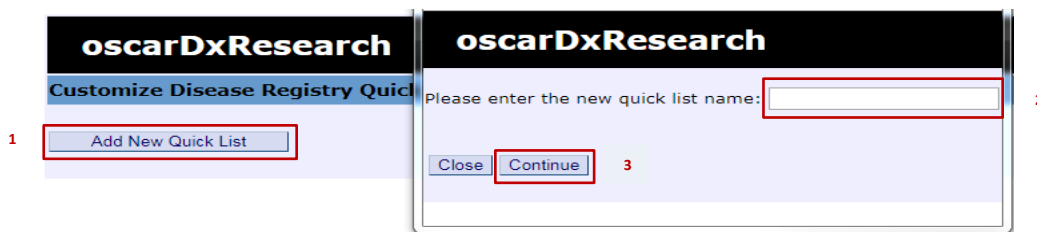

Oscar - Creating Disease Registry Lists & Adding Conditions

1. In admin choose System Management
 2. Choose Customize Disease Registry
 3. Choose Add New Quick List if you want to make a new list
 4. Choose Edit Quick List if you want to add to an existing list
- **** The default list is the 1st to pop up – depending on your practice, you might want this to be the 15-20 most common conditions and then create other list categories to make searching easier. Oscar sorts the lists alphabetically, so as it get longer, it gets more difficult to find the condition you want. You can put the same condition in multiple categories. See some examples below.

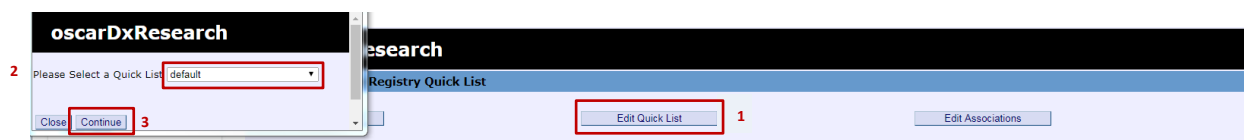

If you are creating a new list ...

1. Select add new quick list
2. Enter the name of your list - you can make a personal list with your favorites or use disease/condition categories
3. Select continue to add conditions (see below)

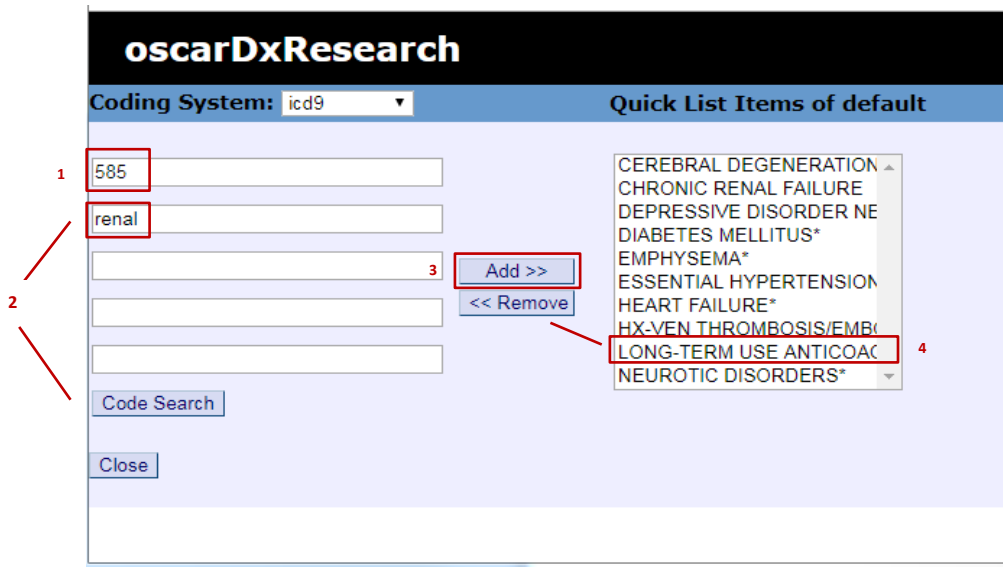

If you are editing an existing list ...

1. Select edit quick list
2. Pick the list you want to add a condition to
3. Select continue to add conditions (see below)

To Add Conditions to your list

1. Add the ICD9 code if you know which one you want
2. Or type in the condition & select code search
3. Once you have your ICD9 codes, select add to move them over to your list

To remove a condition you no longer want on a list

4. Highlight it on the right-hand side column & select remove
